

Setup Guide – EMLID Reach RS

PART 3 OF 3 – CONFIGURE FIELDGENIUS TO RECEIVE RTK CORRECTIONS WITH DATA COLLECTOR INTERNET

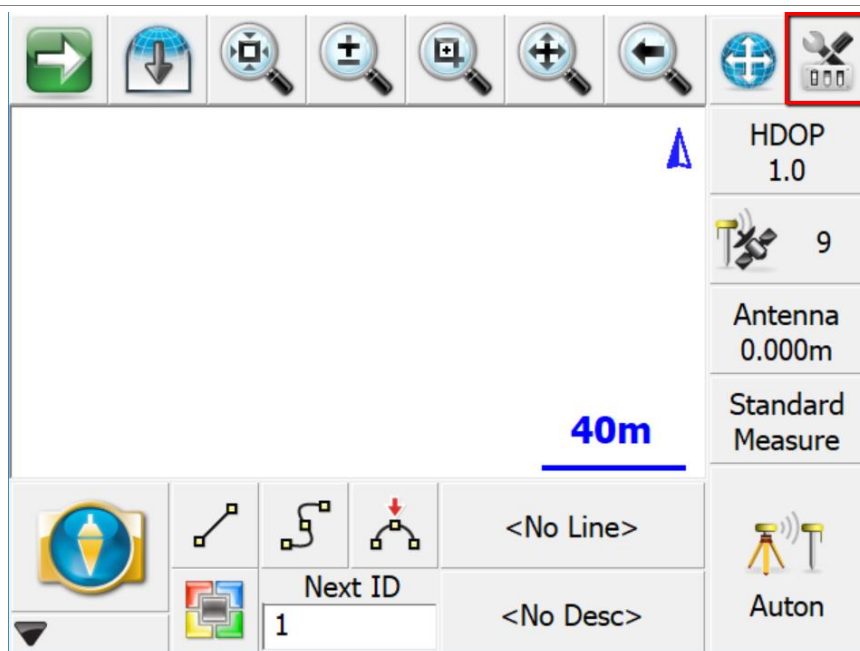

This guide demonstrates the steps required to configure MicroSurvey FieldGenius to receive RTK corrections from a NTRIP caster link.

The Data Collector is required to be connected to the internet to complete these steps.

Part 2 of the setup guide is required to be completed before using this guide.

Instrument Settings

- From the Instrument toolbar pick the **Instrument Settings** icon

Cancel

Connect Link Cont'd

- Pick a Mount Point that is configured to output corrections using the specified format in the ReachView app, in this case RTCM3, then pick **Select**

NTRIP Sourcetable

Mount Point	Identifier	Format	Format Details
1101-RTCM3-...	1101-RTCM3-...	RTCM 3	Data(1),Coord(...
1101-RTCM3	1101-RTCM3	RTCM 3	Data(1),Coord(...
1101-CMR	1101-CMR	CMR	Data(1),Coord(...
1101-CMR+	1101-CMR+	CMR+	Data(1)
1101-Leica	1101-Leica	Leica	Data(1),Coord(...
1101-Leica4G	1101-Leica4G	Leica 4G	Data(1),Coord(...
1101-RTCM2	1101-RTCM2	RTCM 2	Data(1),Coord(...

Select

Cancel

Connect Link Cont'd

- Confirm Mount Point settings and pick **Select**

NTRIP Sourcetable

Please confirm the settings for the selected mountpoint (1101-RTCM3).

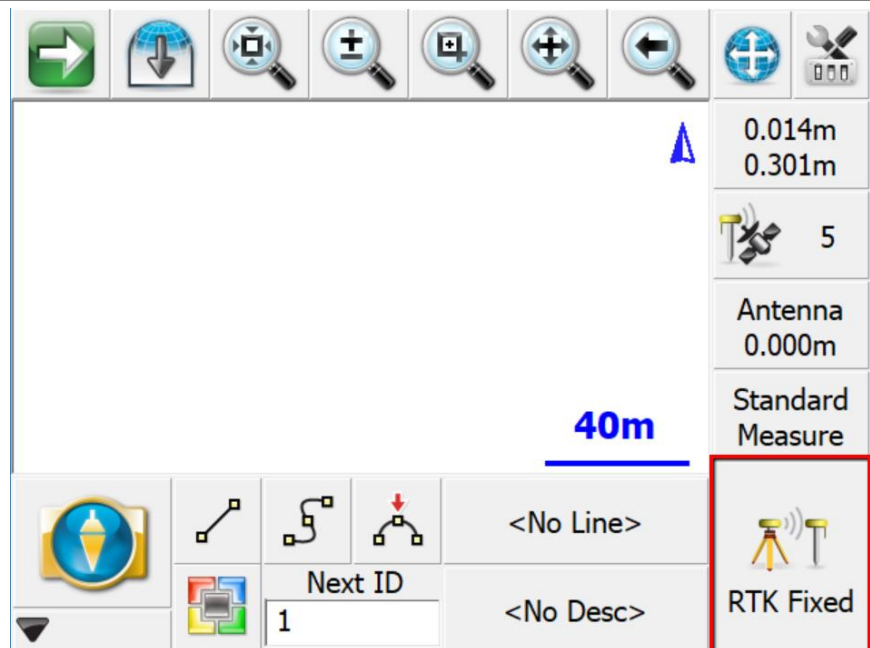

Correction Format

NMEA Required

Connected

- The solution status on the instrument toolbar should soon show RTK Float or **RTK Fixed** when corrections are being received

Complete

The Reach RS is now connected to work with MicroSurvey FieldGenius with an **RTK Fixed** position solution.
